

Care Instructions for Glowstick Printz 3D Printed Shades

General Care:

For indoor use only. Turn off power to the luminaire and allow it to cool before cleaning.

Cleaning:

Dust regularly using a clean, soft microfiber cloth or feather duster. Use light pressure around ribs, contours, and detailed edges.

For deeper cleaning, wipe gently with a soft cloth or sponge dampened with lukewarm water and a mild soap solution. Do not saturate the shade.

For localized marks, apply the same solution with a light-colored cloth. Dab gently without scrubbing.

Remove soap residue with a clean, lightly dampened cloth, then gently blot dry. Keep moisture away from electrical components and connections.

Do not use solvents, acetone, abrasive cleaners, highly alkaline cleaners, scouring pads, or stiff brushes. Use alcohol-based cleaners only if OCL has confirmed compatibility with the printed shade.

Do not submerge the shade or use high-pressure sprays..

Handling:

Handle carefully, especially at thin or detailed edges. Do not twist, bend, or apply excessive pressure to the shade.

Avoid abrasive scrubbing, which can damage the printed surface. Do not apply plastic polish or other surface treatments without approval from OCL.
